

Sovereign Strategy Group - Strategy OS Case Study

Evidence class: owned internal artifact.

Problem pattern: strategy work needed source custody, decision structure, release receipts, and claim boundaries before public use.

Operating response: create decision ledgers, proof gates, release receipts, and blocker classes that separate verified facts from assumptions.

Reusable consulting value: clients can adapt this pattern to make strategy decisions traceable, reviewable, and operational.

Proof boundary: no third-party client outcome, revenue result, professional certification, legal compliance, or guaranteed result is claimed.
